PSP Desktop SMS

The PSP Communicator is a software package that can be loaded on any workstation with an email client (like MS Outlook or Outlook Express) or Internet connection configured. The program makes it possible to send and receive SMS messages to cell phones via the mail client or the Internet. The system makes use of Power Systems Projects (Pty) Ltd as Service Provider for the transmission of messages to and from cell phone networks.

Features:
- All cell phone networks in South Africa supported.
- Common contact list for all users on a local area network.
- SMS Scheduler: Program messages as reminders for meetings, birthdays, contract renewals, etc.
- Batch SMS feature to any selection of the contact list.
- Receive SMS replies into mail client inbox.
- External query facility: Send personalised messages to selected clients from an external database containing merge fields like outstanding balances.

PSP Surveillance

The PSP surveillance package can be added to the PSP communicator to enable automatic SMS messages from a workstation equipped with a web cam. The service provider hosts the images, while the SMS messages with Internet links to images are sent to pre-selected cell phones.

Features:
- Motion sensor activation option.
- Picture Scheduler: Produce remotely viewable snapshots of stock or showrooms on pre-determined times.
- Activate and de-activate camera by SMS from mobile phone.
